Dear Sports Gambler,

In this report, I would like to share with you a simple hockey betting system used by a lot of sports gamblers here in America.

This system is only mechanical and involves flat betting. Of course, the addition of a good money management and progression can be very useful.

The following system is called “The 3 conditions NHL system”

As you can see by the name, we will select our teams by following some simple conditions.

In order to select the best teams that fit the system, you will need the daily standing for the NHL which you can find at any reputable sports websites such as foxsports.com or TSN.com.

**The System**

This system has been developed for the NHL’s regular season. You shouldn’t use this system for the playoffs.

**The Stats**

Here’s the stats you will need in order to use this system:

- **GP** Game Played
- **GF** Goal For
- **GA** Goal Against
- **PTS** Total Points
- **AGSF** Average Goals Scored For
- **AGSA** Average Goals Scored Against
- **PGSH** Possible Goals Scored (Home Team)
- **PGSA** Possible Goals Scored (Away Team)
- **SA** Standing Average

As for the GP, GF and GA, you can find these stats on any good website. As for the AGSF, AGSA, PGS and AS, I will show you how to calculate these important numbers.

**AGSF**

The AGSF (Average Goals Scored For) is calculated as follow:
GF / GP

So if Ottawa has played 53 games (GP) and scored (GF) 218 goals, the AGSF is 218 / 53 = 4.11

AGSA

The AGSA (Average Goals Scored Against) is calculated as follow:

GA / GP

So if Ottawa has played 53 games (GP) and has taken (GA) 128 goals, the AGSA is 128 / 53 = 2.41

PGSH

The PGSH (Possible Goals Scored for the home team) is calculated as follow:

( AGSF for the home team + AGSA for the visiting team ) / 2

PGSA

The PGSA (Possible Goals Scored for the Away Team) is calculated as follow:

( AGSF for the away team + AGSA for the home team ) / 2

In other words, to be as clear as possible, here’s what is the PGS for both team (Home and Away)

For team A (home) :
PGS=(Average of goals scored by A + Average of goals taken by B)/2

For team B (away) :
PGS=(Average of goals scored by B + Average of goals taken by A)/2

The average of goals scored is calculated as follows :
Total of goals scored/Total of matches played.
The average of goals taken is calculated as follows: Total of goals taken/Total of matches played.

SA

The SA (Standing Average) is calculated as follow:

\[
\left( \frac{PTS}{GP} \right) / 2
\]

So, as for Ottawa, if their total points (PTS) is 77 and their total game played is 53, the SA (Standing Average) will be \( \left( \frac{77}{53} \right) / 2 = 0.726 \)

The last thing you need to know to implement the system is the POS (Position). This is simply the position of each team for a specific day.

In fact this is simply which team is at home and which team is away.

The Selections

To select which team you will place a bet on, you have to bet on team which meets at least one of these three conditions:

**Condition 1:**
* The team is at home, AND
* Its SA is higher, AND
* Its PGSH plus 0.5 is higher or equal to the PGSA

**Condition 2:**
* Team is at home, AND
* Its PGSH minus 0.5 is higher or equal the PGSA

**Condition 3:**
* Team is away, AND
* Its SA is higher, AND
* Its PGSA minus 0.5 is higher or equal to the PGSH

So, these are the only things you need to calculate and all the rules you have to follow in order to raise your winning rate betting on the NHL.
Now, let’s see with an example how to calculate everything.

So, let’s take a look at a game on February 7th 2006 where Buffalo play Montreal. Montreal is the home team and Buffalo is the away team.

**The Maths**

**Step 1**

In step 1, we need to calculate the PGSH for Montreal (Home Team).

\[
\text{PGSH} = \frac{\text{AGSF} + \text{AGSA}}{2}
\]

So the numbers are

The AGSF for Montreal is

\[
\frac{\text{GF}}{\text{GP}} = \frac{154}{53} = 2.90
\]

**So, the AGSF for Montreal is 2.90**

The AGSA for Buffalo is

\[
\frac{\text{GA}}{\text{GP}} = \frac{146}{52} = 2.80
\]
So, the AGSA for Buffalo is 2.80

Now, the PGSH for Montreal is

\[ \text{PGSH} = \frac{2.90 + 2.80}{2} = 2.85 \]

So, The PGSH for Montreal is 2.85. (You will need this number for the 3 conditions)

**Step 2**

In step 2, we need to calculate the PGSA for Buffalo (Away Team)

\[ \text{PGSA} = \frac{\text{AGSF for the away team} + \text{AGSA for the home team}}{2} \]

OK, we’re going to do the same thing for Buffalo as we did for Montreal.

We need to know the AGSF

The numbers will be

GF (Goal For) / GP (Games Played)

\[ \frac{173}{52} = 3.32 \]

For Montreal

GA (Goal Against) / GP (Games Played)

So the numbers are

\[ \frac{173}{53} = 3.26 \]

Now, the PGSA for Buffalo is

\[ \text{PGSA} = \frac{3.32 + 3.26}{2} = 3.29 \]

The SA
Ok, now the SA (Standing Average)

The SA for Montreal is PTS / GP

So, 56 / 53 = 1.05

For Buffalo,

The SA is PTS / GP

71 / 52 = 1.36

**The 3 conditions**

Remember that in order to place a bet, you have to bet on team which meets at least one of these three conditions:

* **Condition 1:**
  * The team is at home, AND
  * its SA is higher, AND
  * Its PGSH plus 0.5 is higher or equal to the PGSA

* **Condition 2:**
  * Team is at home, AND
  * Its PGSH minus 0.5 is higher or equal to the PGSA

* **Condition 3:**
  * Team is away, AND
  * Its SA is higher, AND
  * Its PGSA minus 0.5 is higher or equal to the PGSH

As you can see in this example, no team fits the 3 conditions. However, as you can see, for the third condition, Buffalo miss the condition by only 0.06. So, if you have no teams to bet on for a specific day, Buffalo could be a good pick for this day. By the way, they won the game!
So, you only have to do the same process again for every possible game everyday and you will be able to find some very good opportunities to earn some good money.

This systems has worked very well for the past years and continue to be one of the best to be used when it comes to NHL betting.

I know that at first, the numbers and the maths seem maybe hard to understand but as soon as you’ll catch everything, it will take just about 30 minutes and you’ll see that your winning rate will simply goes to the roof!

Good luck in your betting!
